WEATHER SYNOPSIS BY REGION

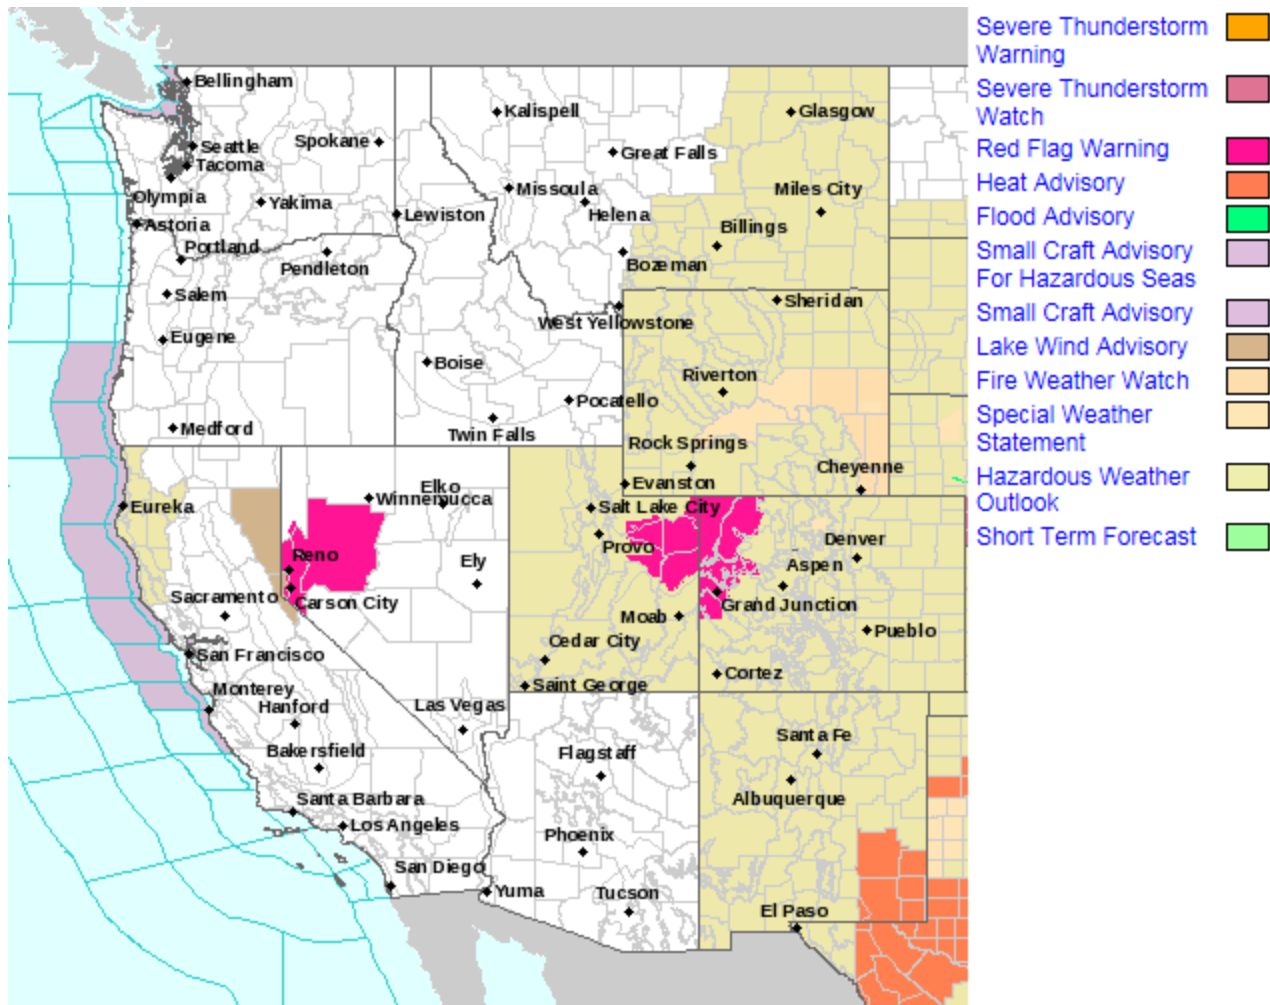

NORTHERN CALIFORNIA

A low pressure trough over the west coast will deepen through early Wednesday then move east. Clouds will increase over the northern end of the Northern California, and there is a slight chance of a shower or thunderstorm near the Oregon state line late Tuesday into early Wednesday. Temperatures will be near normal today and possibly a few degrees below normal on Tuesday. Winds will increase, and Southwest wind gusts will reach 30 mph east of the Cascade-Sierra crest this afternoon and 35-40 mph Tuesday afternoon, but humidity will remain above 15% there both days . A strong sea breeze is likely in coastal regions and moderate up-valley/up-slope winds will be common inland. The trough will move out of the region by late Wednesday and a weak high pressure ridge will follow, but the next trough will approach the region by late Thursday. This trough will produce about the same results as the current one - a cooling trend with more clouds and increasing southwest to northwest winds. There is a slight chance of showers or thunderstorms in far north in the region late Thursday through early Saturday. Southwest to west winds east of the crest will gust to 35-40 mph again from Friday through Sunday, with RH remaining above critical levels.

SOUTHERN CALIFORNIA

A weak trough over the West Coast will maintain near to a little below normal temperatures across the region through this weekend. Maximum temperatures will be in the mid 70s to mid 80s across the mountains and mid 80s to mid 90s in the valleys. Minimum humidity will be mainly between 12% and 25% above and inland from the marine layer through this weekend. The marine layer will be between 2,000 and 3,000 feet deep, with morning low clouds and fog moving over most coastal valley locations. Westerly afternoon winds of 15 to 25 mph with gusts to 40 mph will surface across the mountain ridges and desert passes through this weekend.
